

Because the molecular film laid down on the rim protects against moisture vapor, there is no need to use expensive nitrogen.

As for tires, LifeLong cools them by up to 10°C; the rubber is more supple and air is retained (normally up to 0.3 bar/5 psi is lost per month); which extends tubeless tire life by up to 30%.

Lubrication of the tire bead and flange area means that mounting and de-mounting is quicker and easier.

The combined payback from all of these benefits makes LifeLong an essential fitment for all heavy-duty OTR vehicles, especially in mining, quarrying, construction etc.

STANDARD LIFELONG

Protection down to -20°C

ARCTIC LIFELONG

Protection down to -40°C *
(Also advised for extreme heat conditions)

SUPPLIED IN

25 liter / 6.6 gallon drums
220 liter / 58 gallon drums
1000 liter / 264 gallon IBCs (Totes)

Manufactured under licence
in the UK by the OKO Group

OKO LifeLong is a breakthrough in heavy-duty OTR wheel rim and tire protection. It will do more to extend the life of both, than any previous product.

Existing wheel/tire life extenders have several problems:

- The products deplete: you need to top up to maintain protection
- Either no anti-freeze/heat protection: or may contain harmful ingredients
- No protection against rust when the wheels remain static
- No clear visual indication when air leaks occur
- Only effective on steel wheels, not alloys

LifeLong is a free-flowing liquid (not a tire sealant) formulated in a whole new way, incorporating cutting-edge technology, to give you these operating advantages –

- Long life anti-depletion corrosion protection on all rims
- Non-hazardous anti-freeze built in as standard
- Nanotechnology protective film forms on the wheel rim
- Effective 24/7 rim protection, even when static
- Improved heat transfer for maximized tire life
- Great lubricity - for easier tire removal
- Bright UV dye flags up bead/O-ring or valve air leaks, rim cracks
- Will not clog valves or TPMS
- Biodegradable formula

The carboxylate chemical technology in LifeLong actually cleans steel and alloy wheel rims: see these 'before and after' images.
